Full core-cost observations: one fresh setup + one valid N=4 batch per configuration
Prio3
Professor Boolean (STD128)
Small-prime BGV
Evaluator time per four-report batch (s)
Serialized collector output per batch (bytes)
One-time fresh-process setup (s)
Whole-process peak RSS (MiB)
Count
Sum(100)
Hist(3)
Hist(8)
Vec(10)
Vec(25)
Vec(50)
Vec(100)
Same host, CPU0, one thread. Logarithmic axes; one diagnostic run, no confidence intervals.
RSS includes all simulated roles/setup/diagnostics. Formats differ; network/DAP wrappers excluded.
Missing Boolean Sum/Histogram bars mean no supplied complete implementation, not zero cost.
